

Welcome to the DISH POS app. In this tutorial, we show you how to set up a flexible payment.

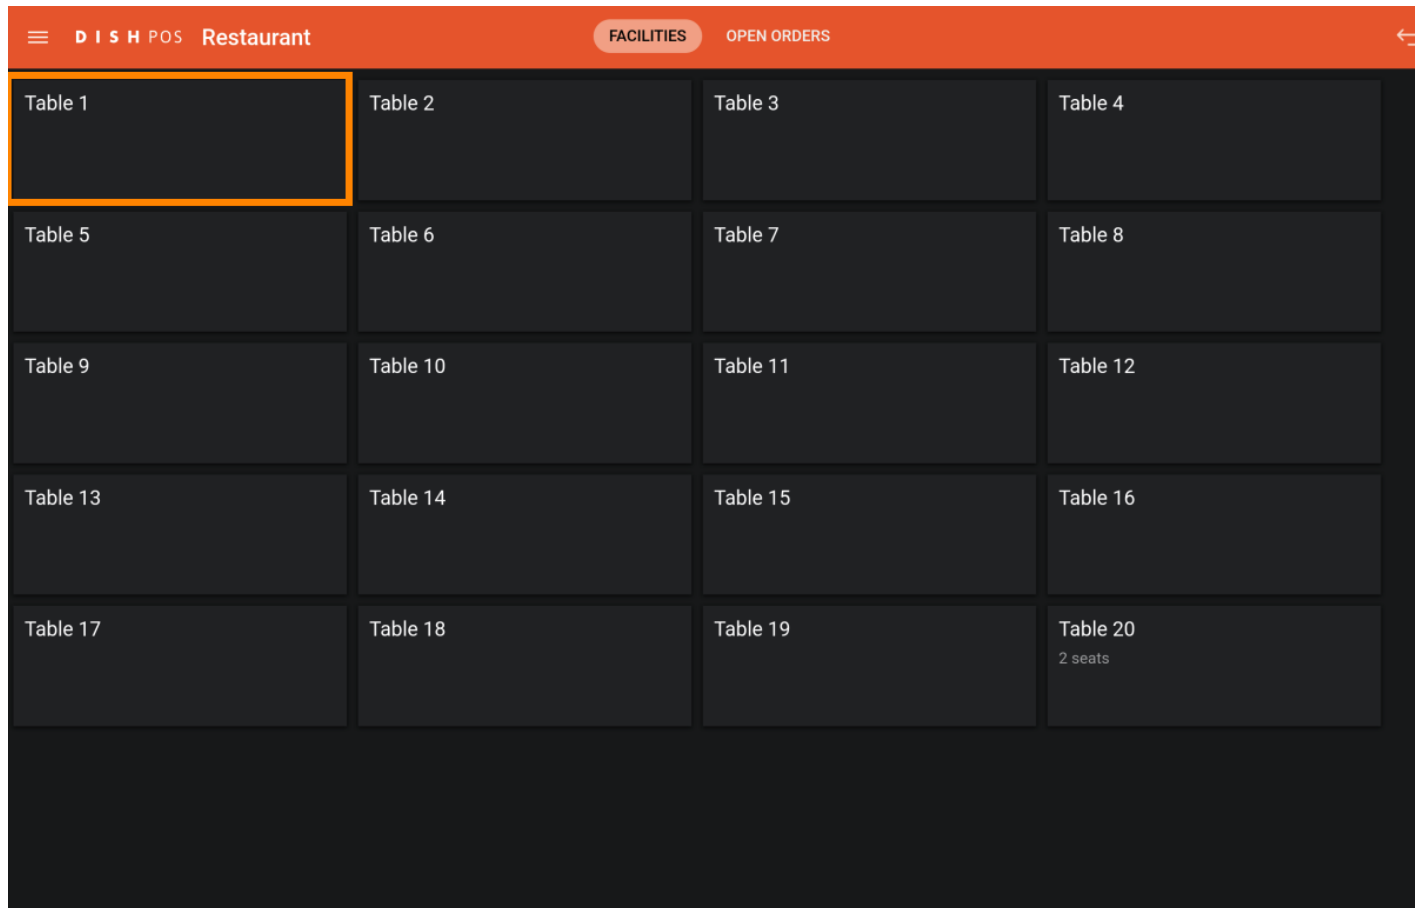

First, select a **facility**.

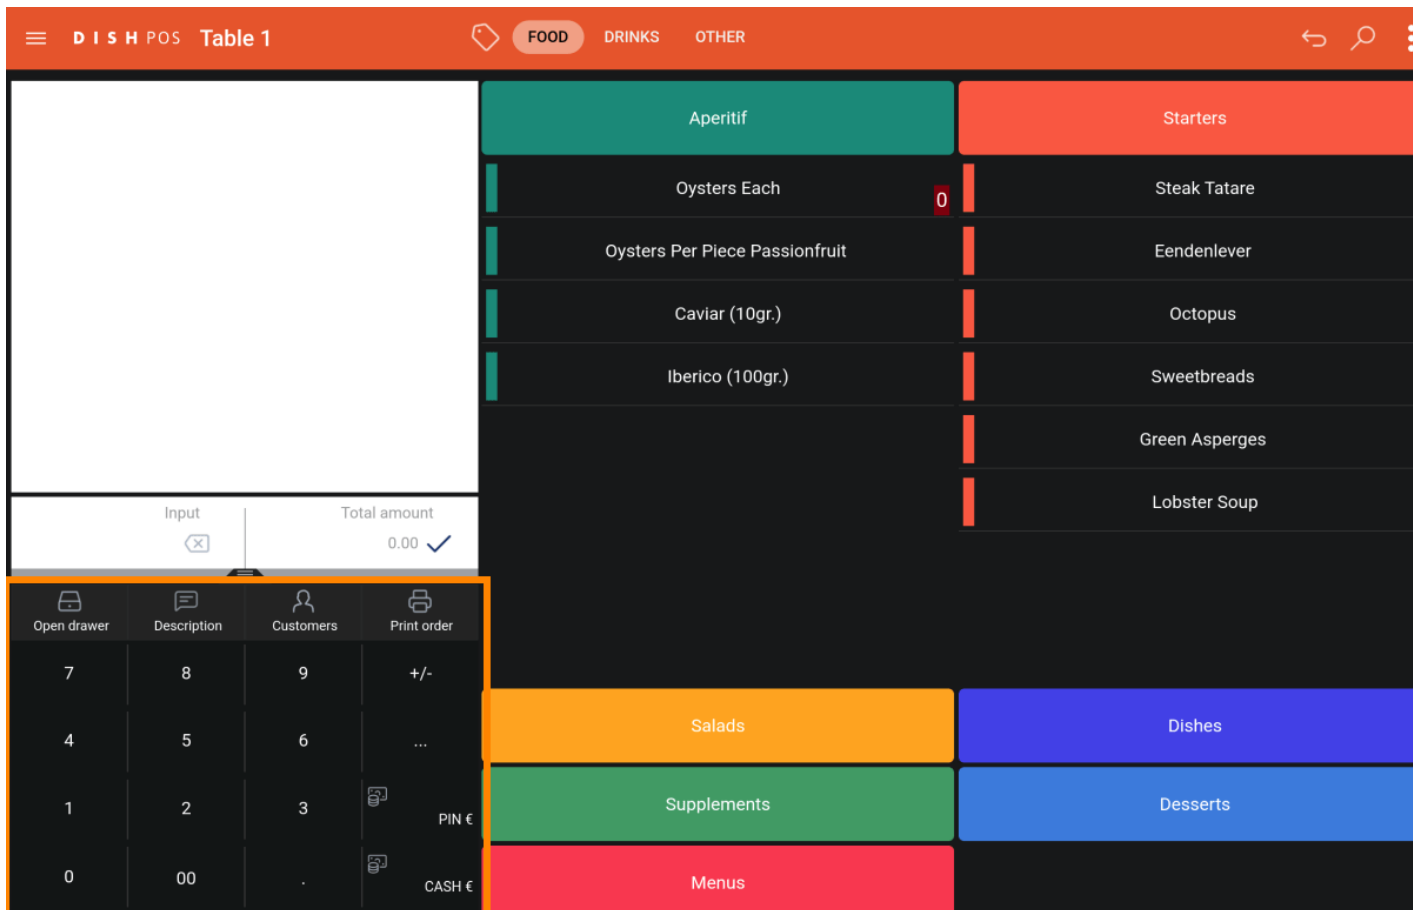

Then open a new **table**.

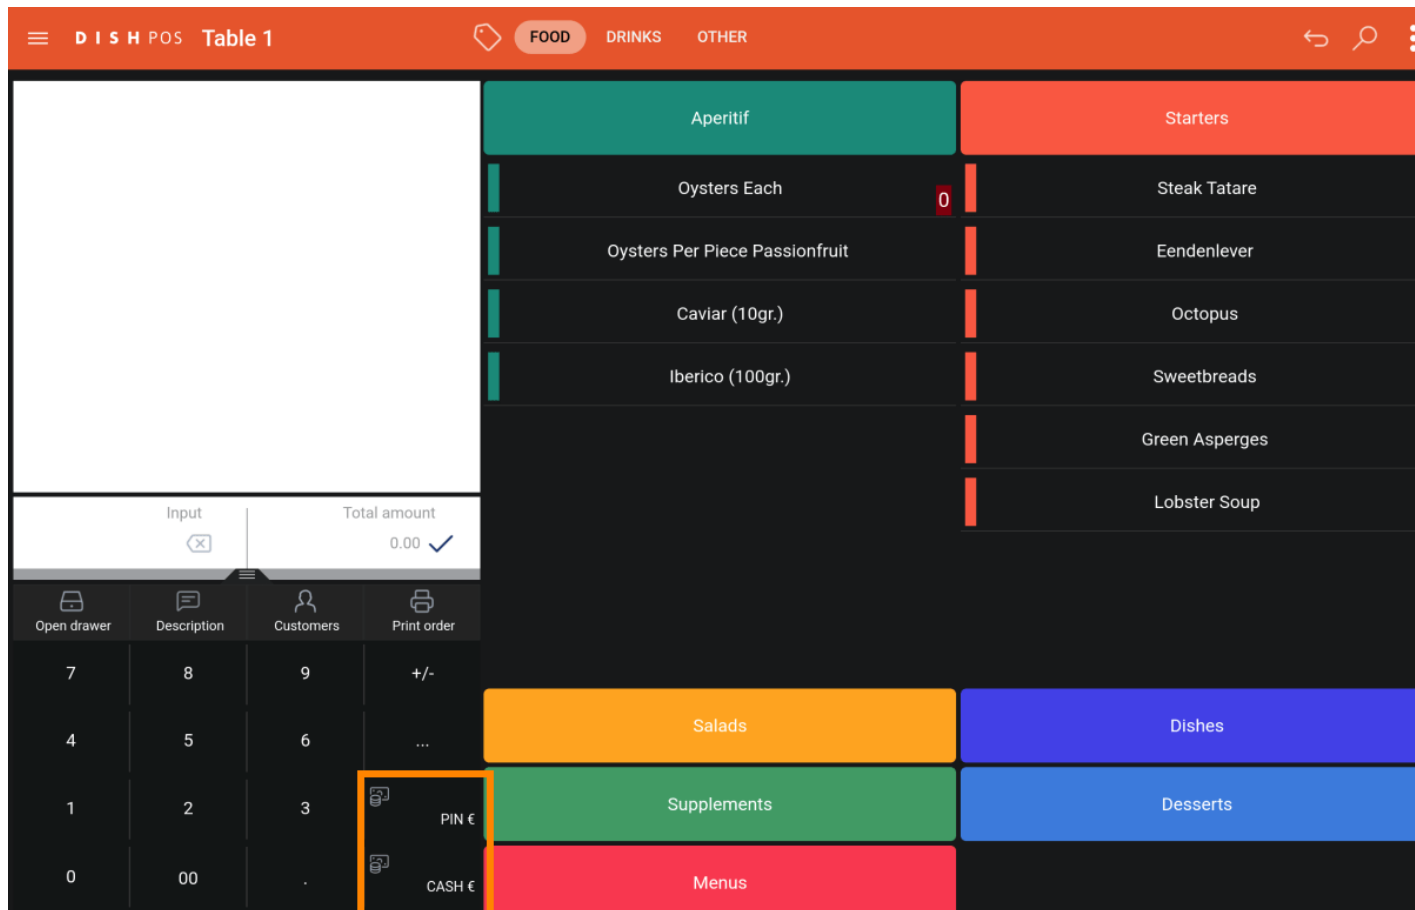

Flexible payment allows the guest to pay an individual amount upfront before an order has been made. To do so, enter the respective amount into the **input field**.

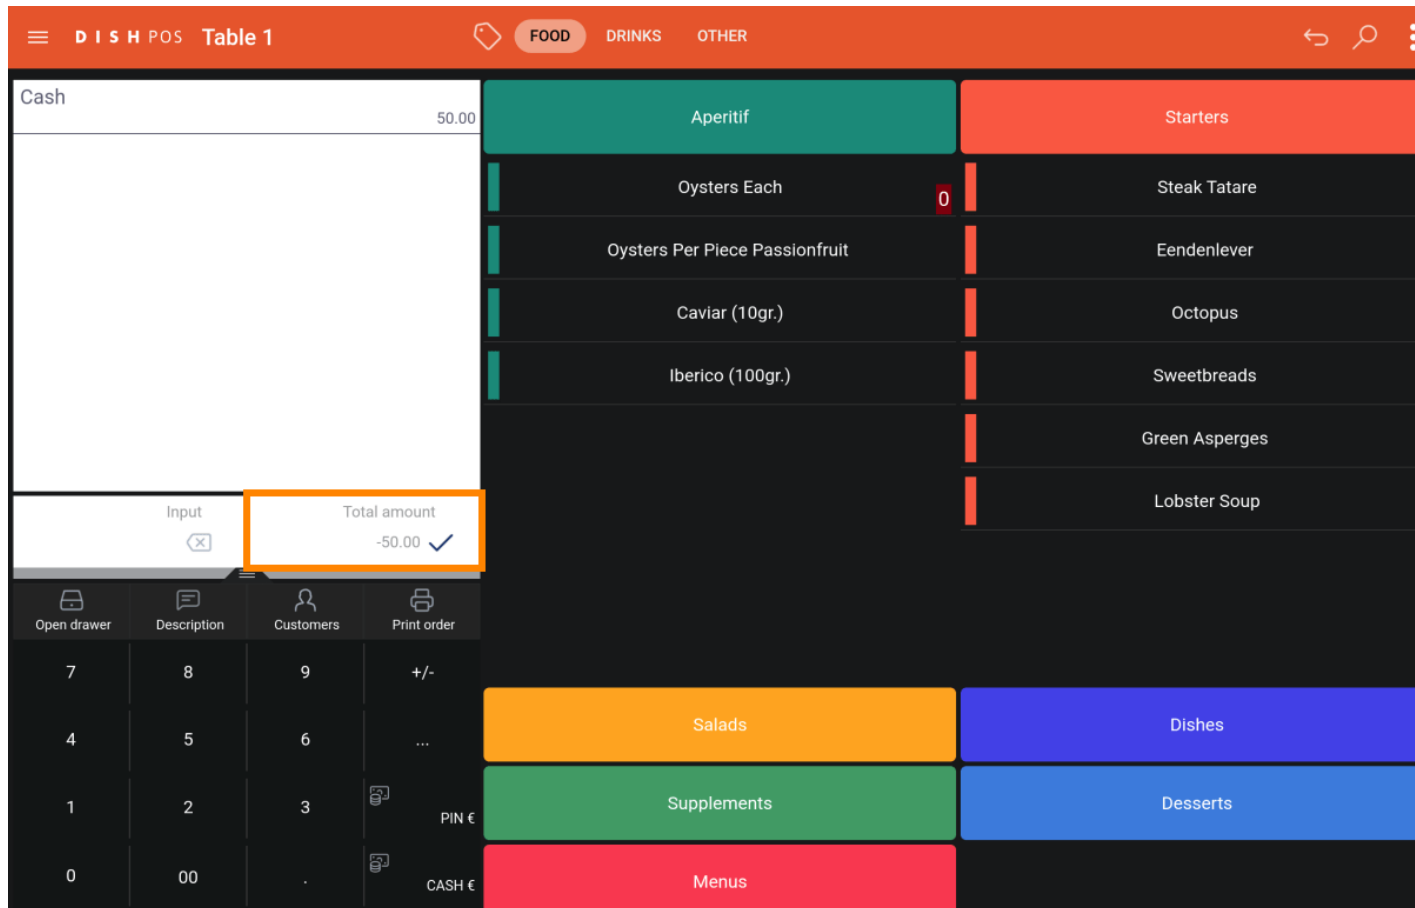

After adding the input, select the guest's preferred payment method. **Note: The payment methods may differ, depending on your settings for the payment methods menu.**

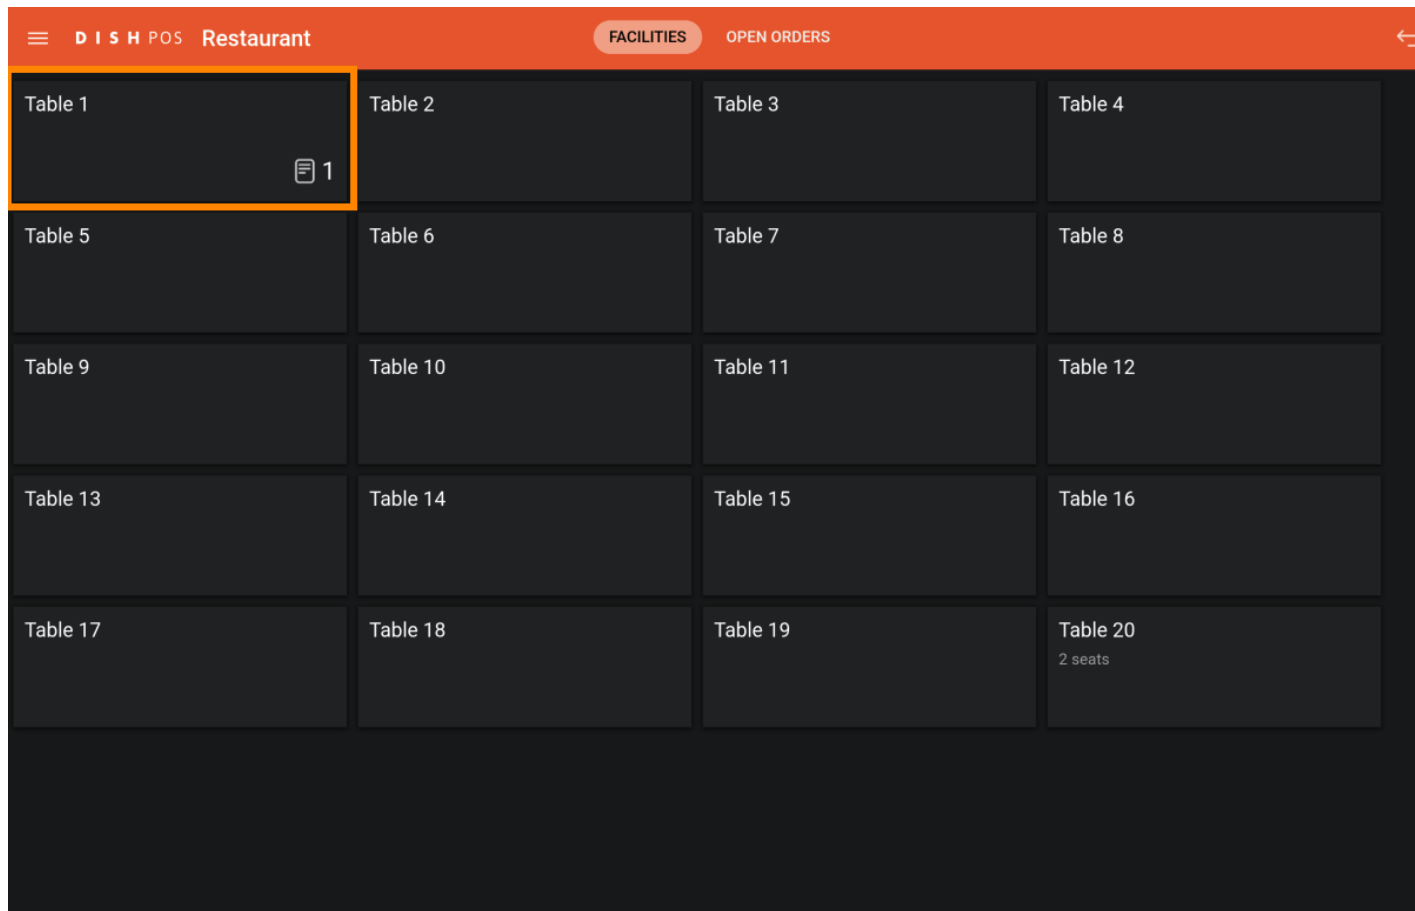

To now temporarily close the order, tap on the **total amount**.

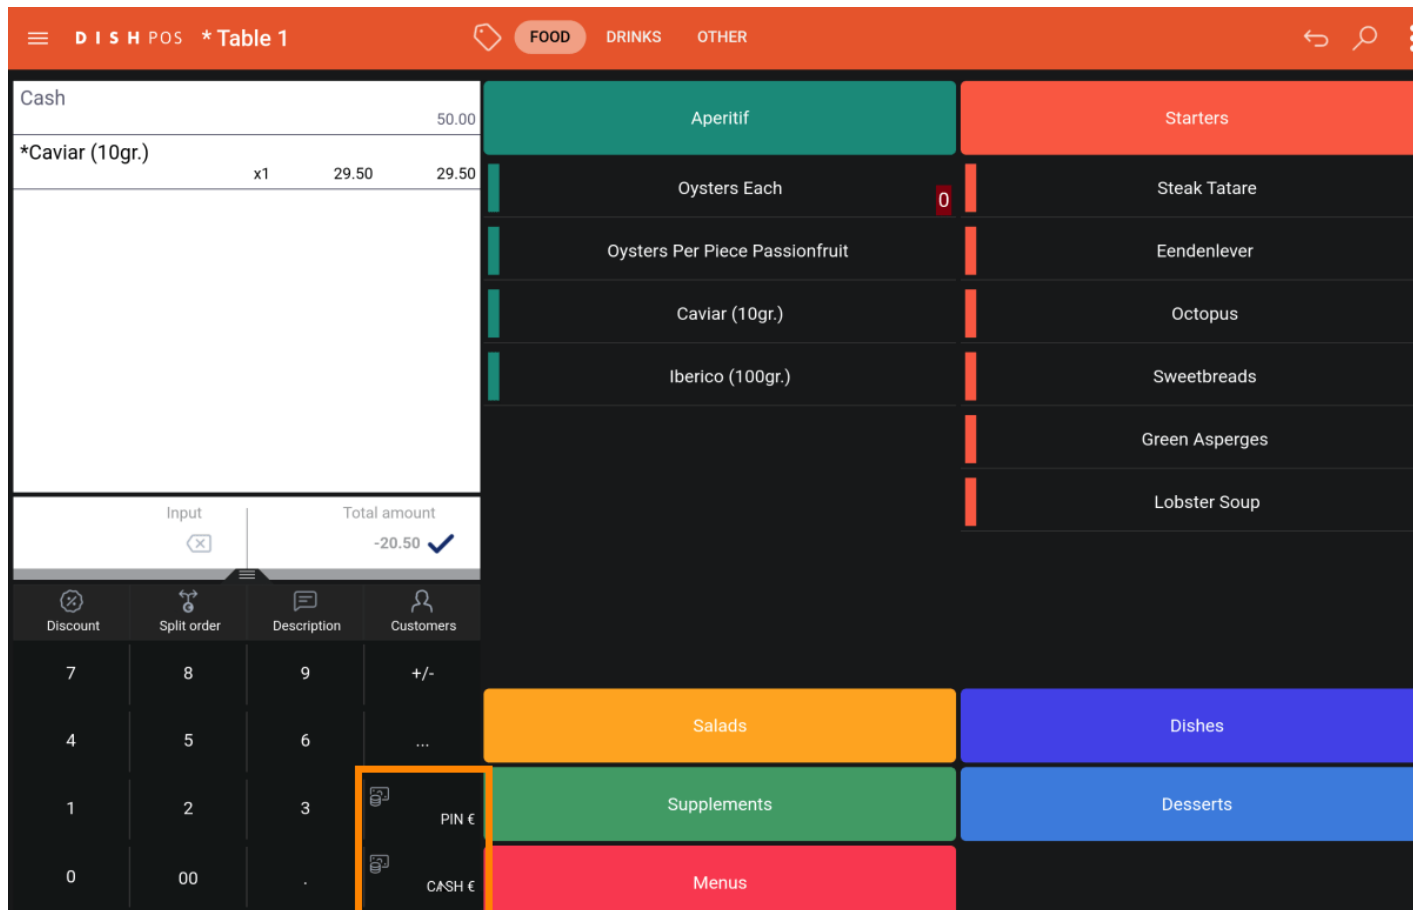

Back to the overview of the tables, you always can then go back to the table with the deposit. Simply tap on the **table** to open it.

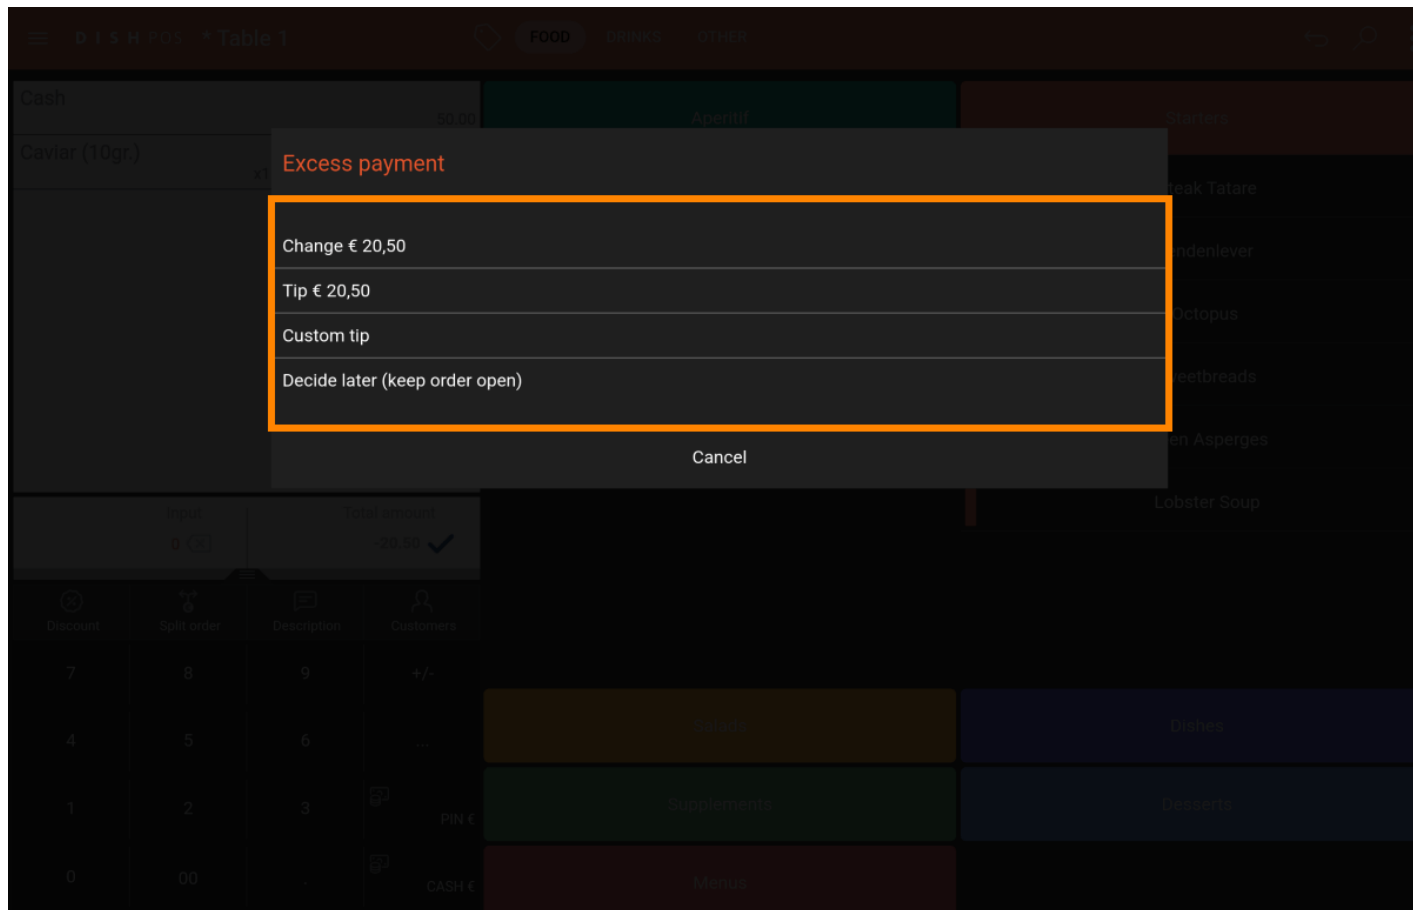

Once you add items to the order, the price will be deducted from the deposit. To then check out, select the guest's preferred **payment method**.

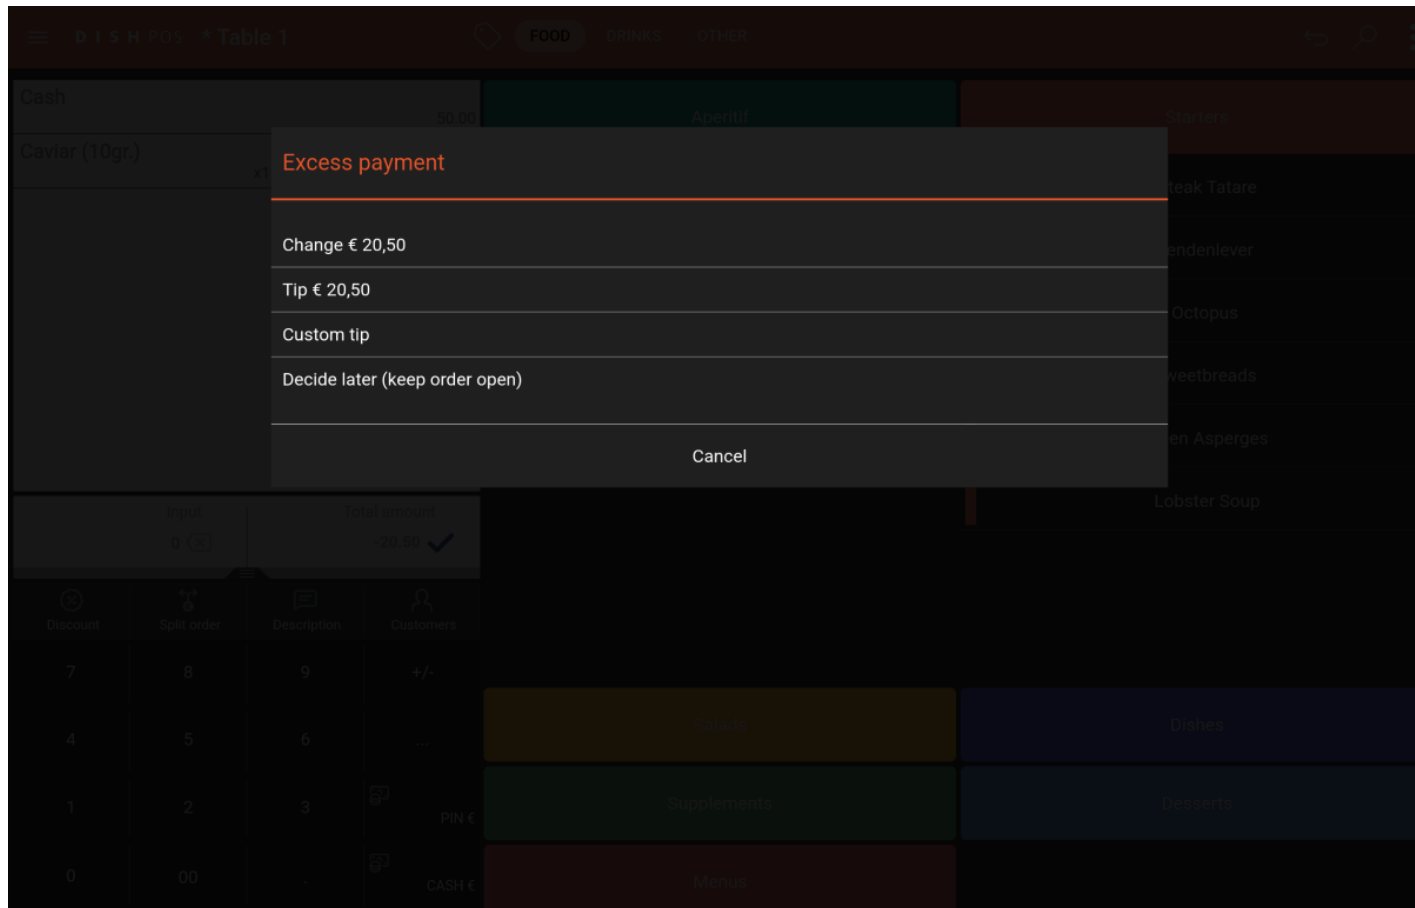

When there is a credit left, you can choose how to handle the remaining amount by selecting one of the given **options**.

That's it. You completed the tutorial and now know how to set up a flexible payment.
