

Welcome to the DISH POS app. In this tutorial, we show you how to adjust the connection settings of your device.

The screenshot displays the DISH POS app interface. At the top, there is an orange header bar containing a menu icon, the text "DISH POS HD Video Demo English", and two buttons labeled "FACILITIES" and "OPEN ORDERS". Below the header, the main area is divided into two sections. On the left, there are four dark gray buttons labeled "Restaurant 2 seats", "Terrace", "Direct Sale", and "E-Commerce". On the right, there is a section titled "Enter table number" in orange text. Below this title is a large dark gray input field. To the right of the input field is a numeric keypad with buttons for digits 0-9, a "00" button, and a "C" button. Below the keypad is a dark gray button labeled "OK".

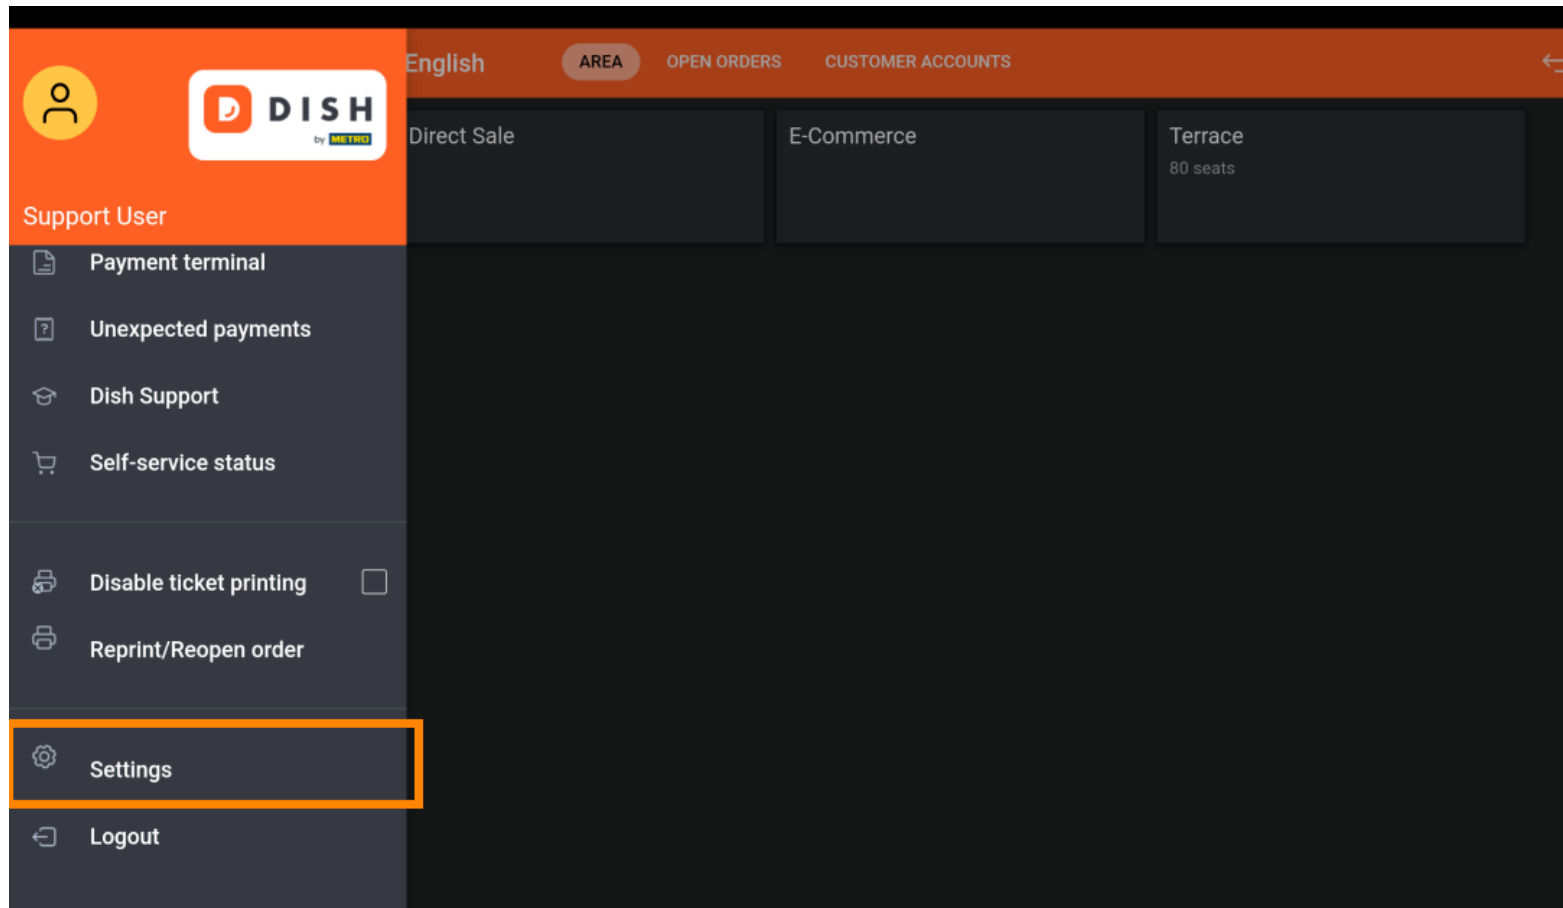

First, open the **menu**.

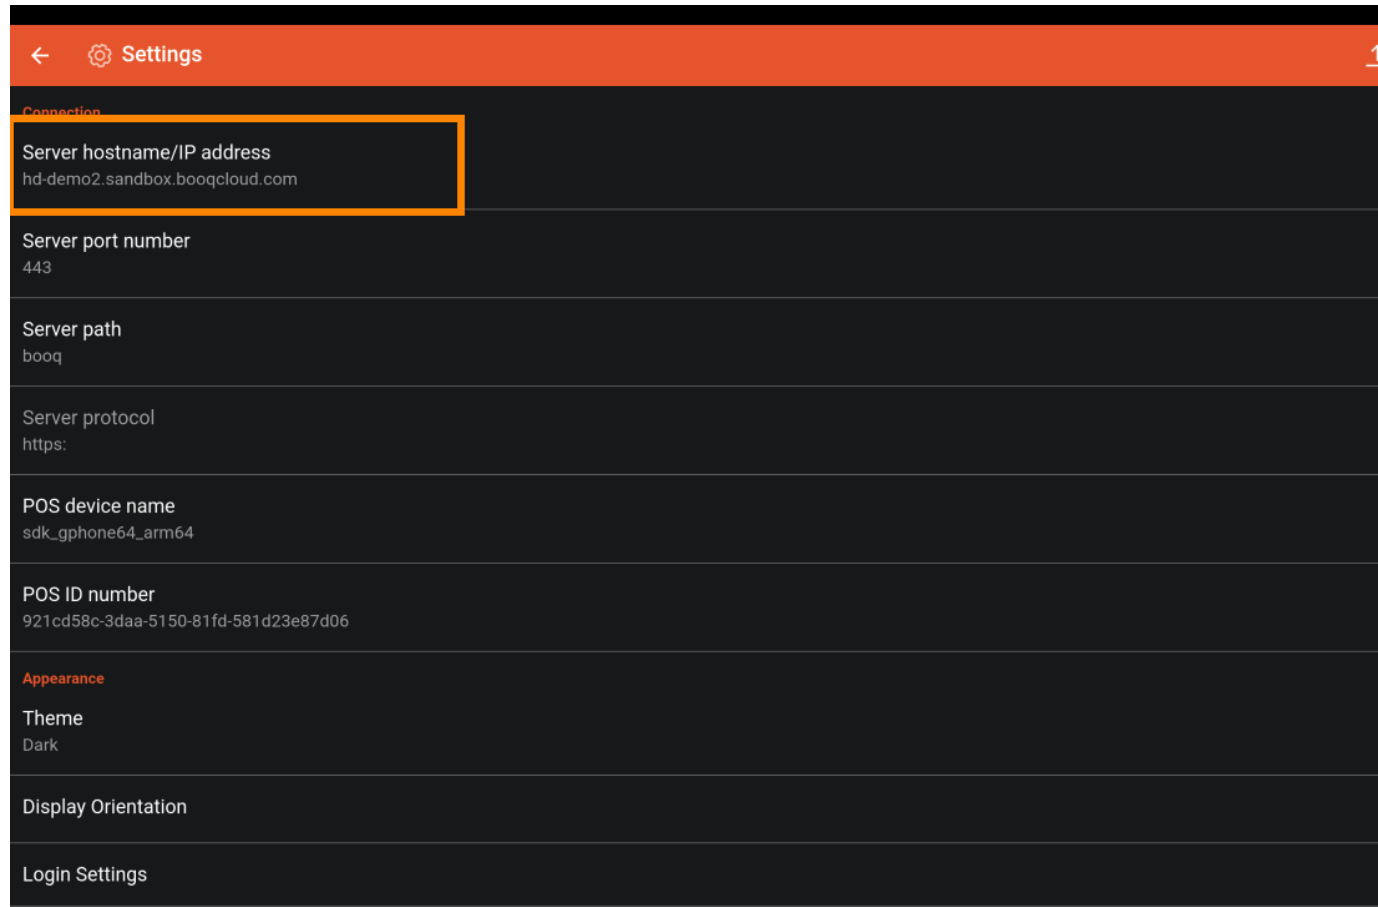

Then go to **Settings**.

By selecting **Server hostname/IP address** you will be able to adjust this accordingly.

The screenshot shows the 'Settings' app interface on a tablet. The top bar is orange with a back arrow, a gear icon, and the text 'Settings'. Below this, the 'Connection' section is highlighted with an orange border. It contains the following settings:

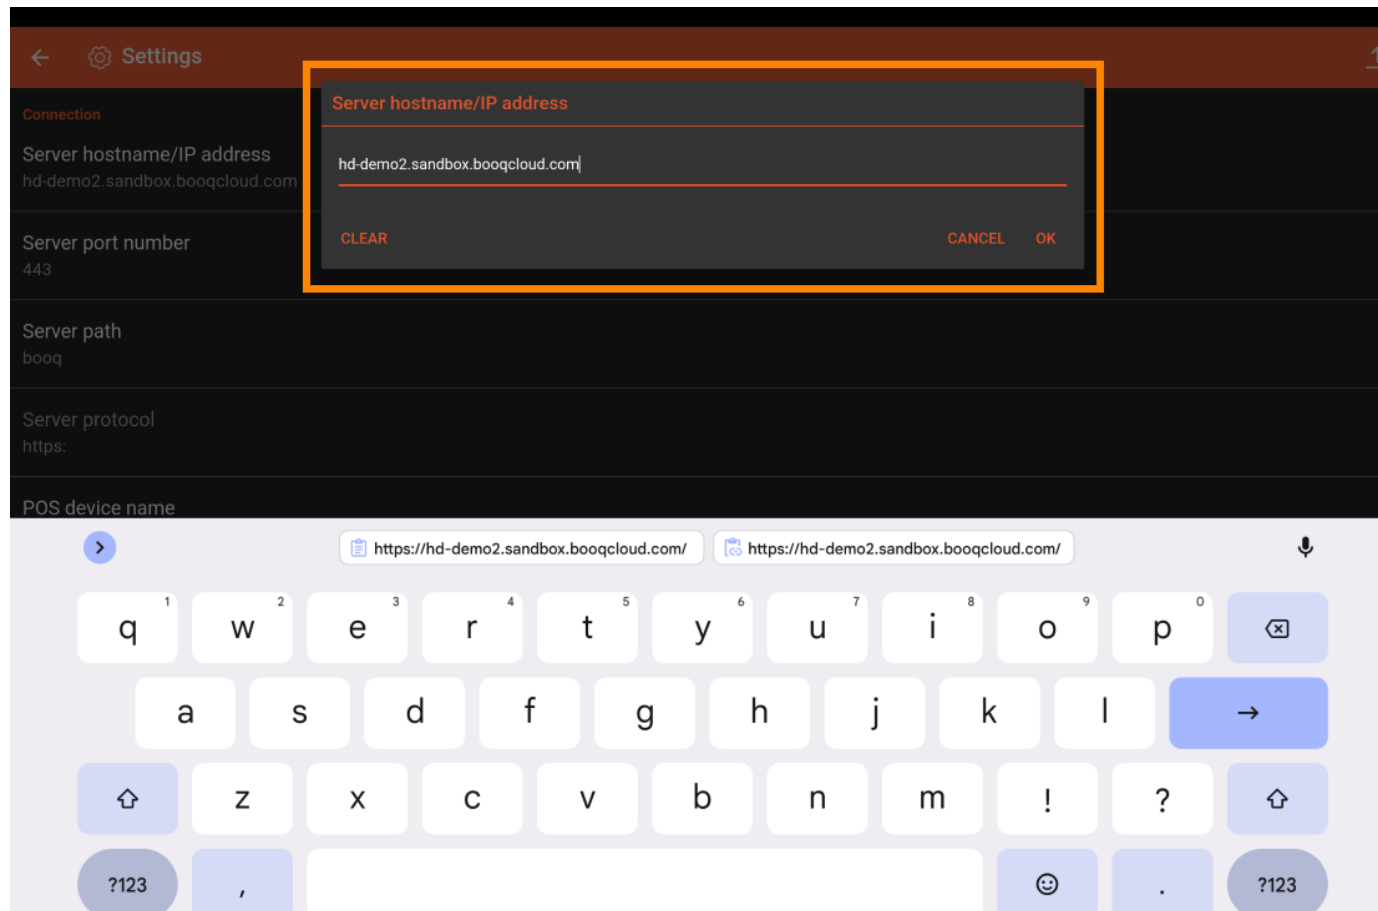

- Server hostname/IP address**: hd-demo2.sandbox.booqcloud.com
- Server port number**: 443
- Server path**: booq
- Server protocol**: https:
- POS device name**: sdk_gphone64_arm64
- POS ID number**: 921cd58c-3daa-5150-81fd-581d23e87d06

Below the 'Connection' section, the 'Appearance' section is visible, containing:

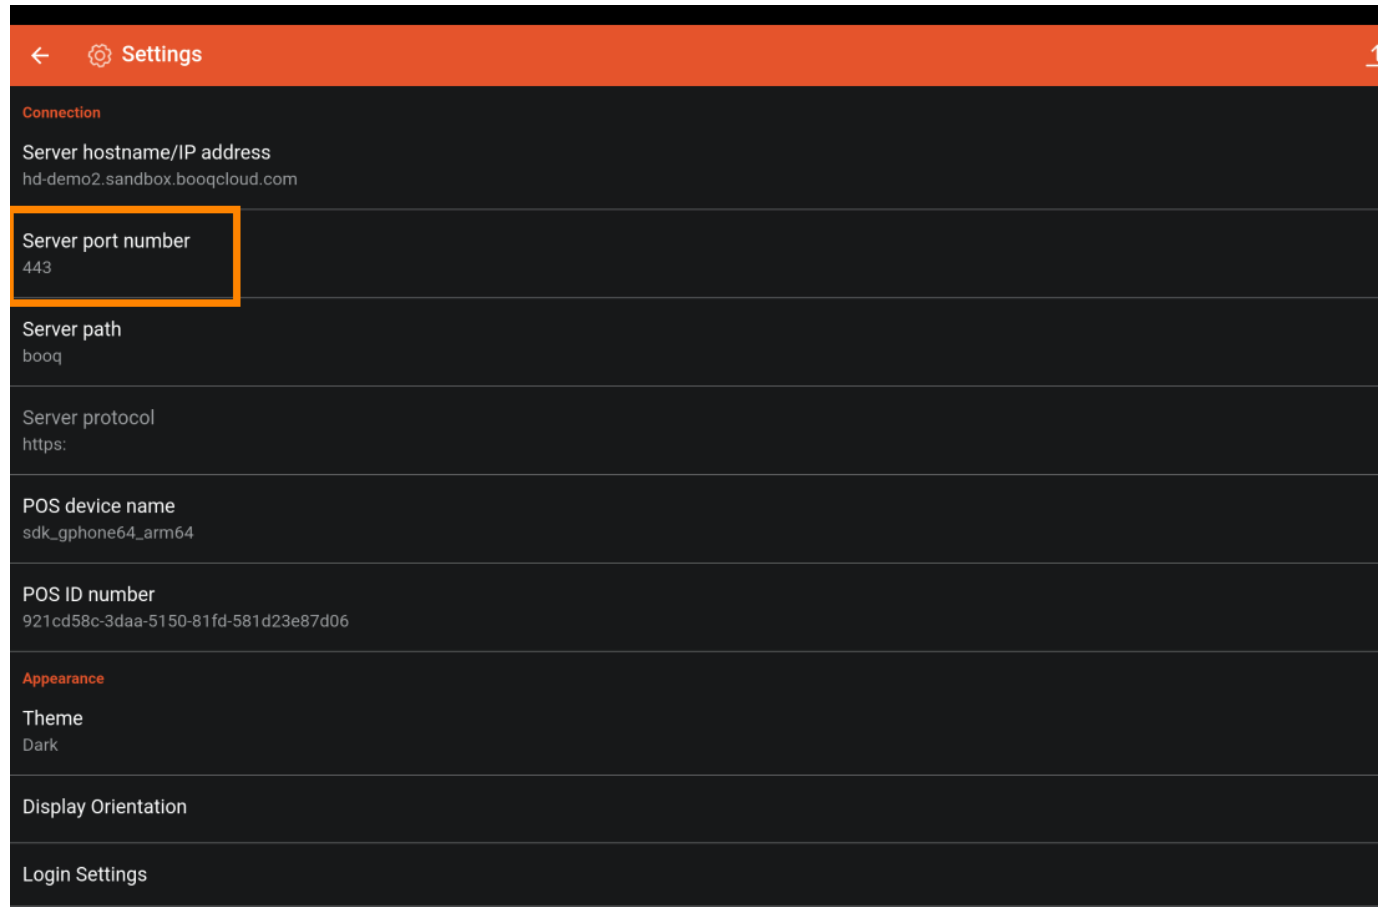

- Theme**: Dark
- Display Orientation**
- Login Settings**

A pop-up will appear for changing the server/IP address. Then enter your new **server/IP address** and confirm the changes with **OK**.

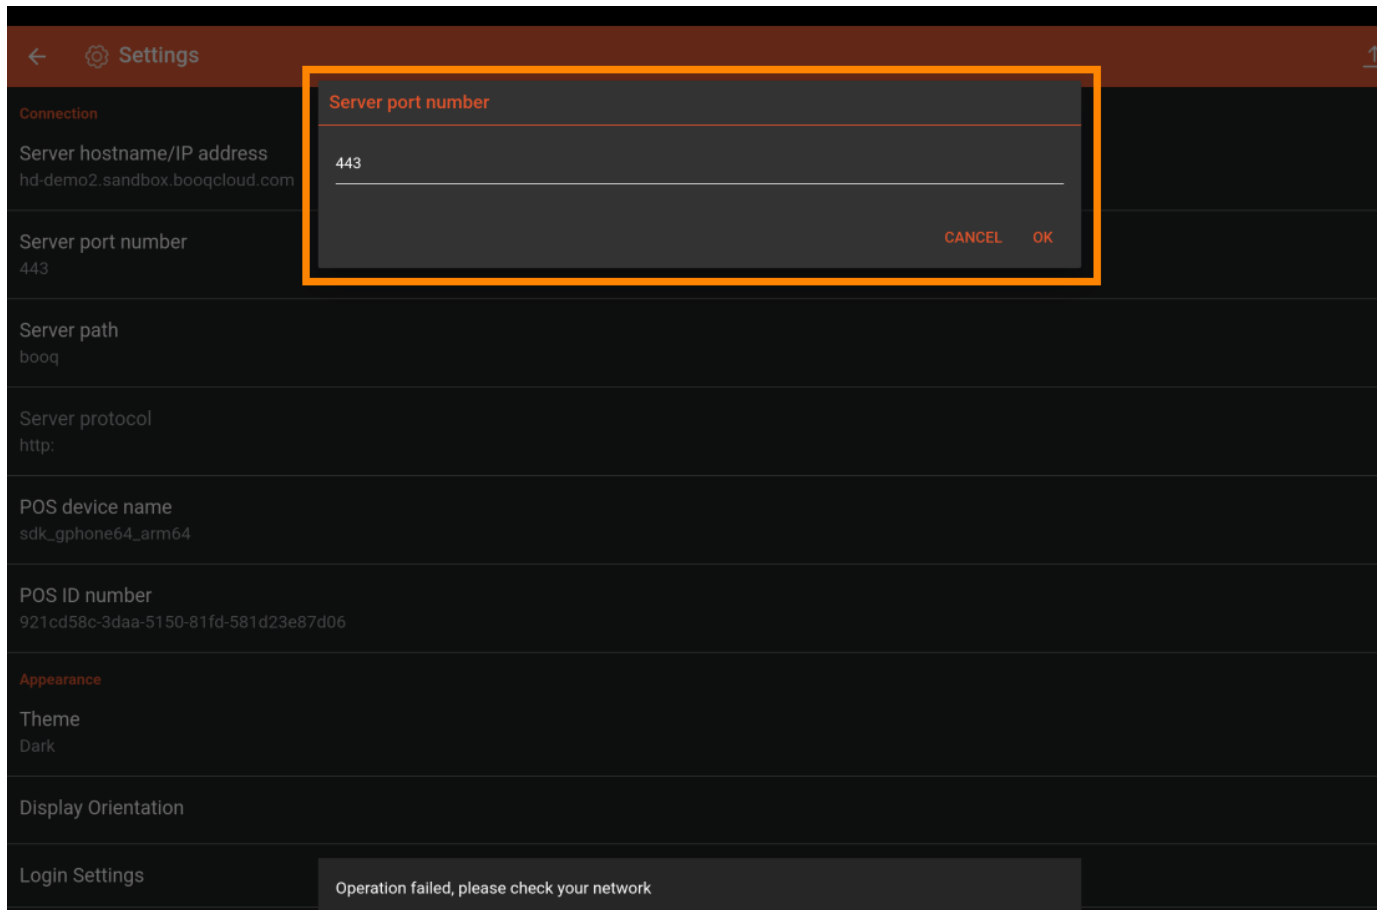

To adjust the port number of the server, tap on **Server port number**.

A pop-up will appear for changing the port number. Now enter your new **port number** and confirm the changes with **OK**. **Note: The default port is 8080.**

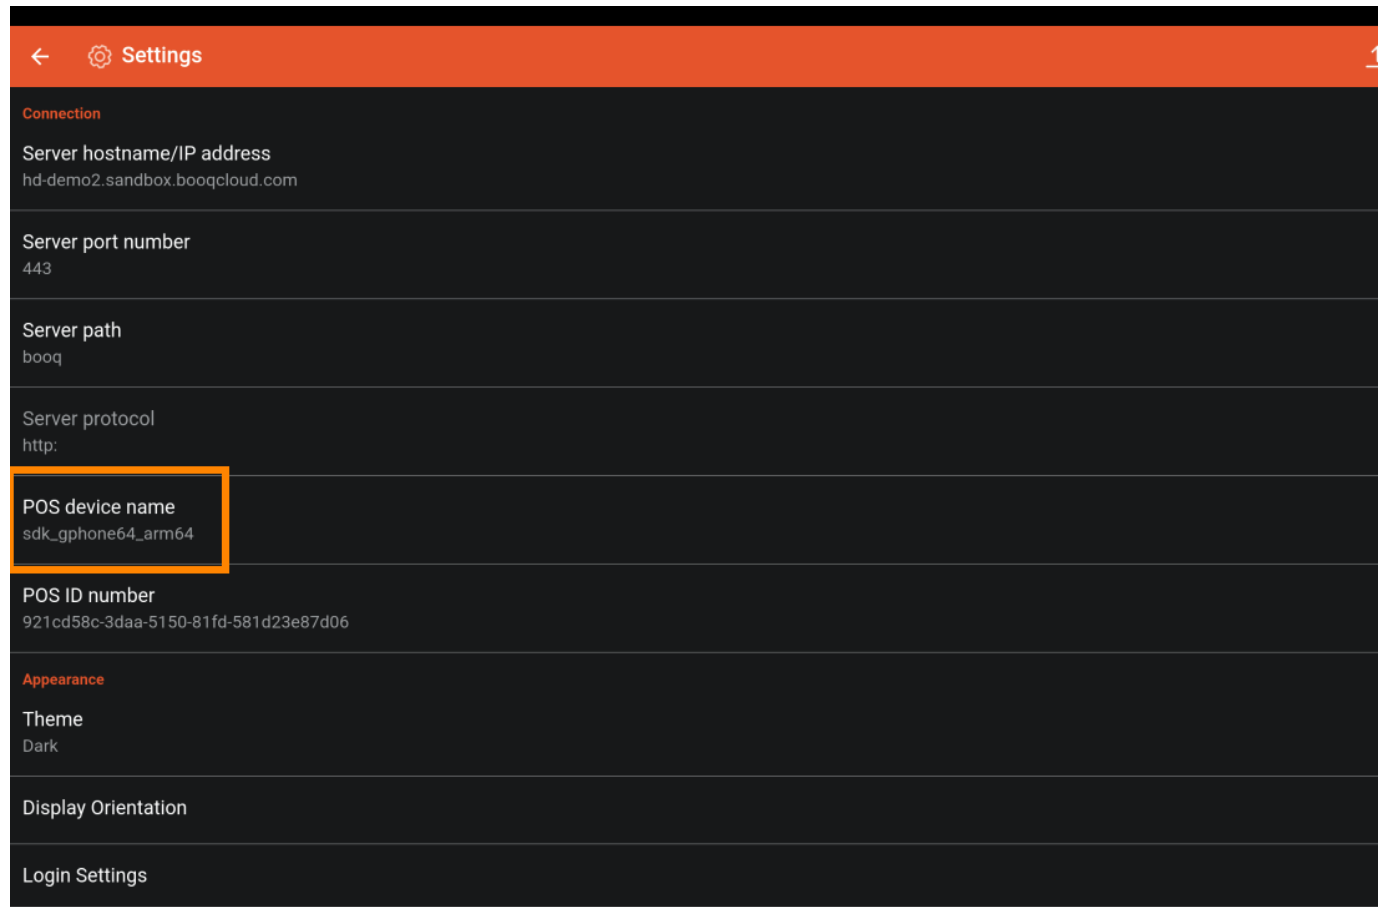

The screenshot shows the 'Settings' screen of the DISH app. A pop-up dialog box is displayed over the 'Server port number' setting. The pop-up has a title bar 'Server port number' and a text input field containing '443'. At the bottom right of the pop-up are two buttons: 'CANCEL' and 'OK'. The background settings are dimmed. The settings listed on the screen are:

- Connection**
 - Server hostname/IP address: hd-demo2.sandbox.booqcloud.com
 - Server port number: 443
 - Server path: booq
 - Server protocol: http:
 - POS device name: sdk_gphone64_arm64
 - POS ID number: 921cd58c-3daa-5150-81fd-581d23e87d06
- Appearance**
 - Theme: Dark
 - Display Orientation
- Login Settings**

An error message at the bottom of the screen reads: 'Operation failed, please check your network'.

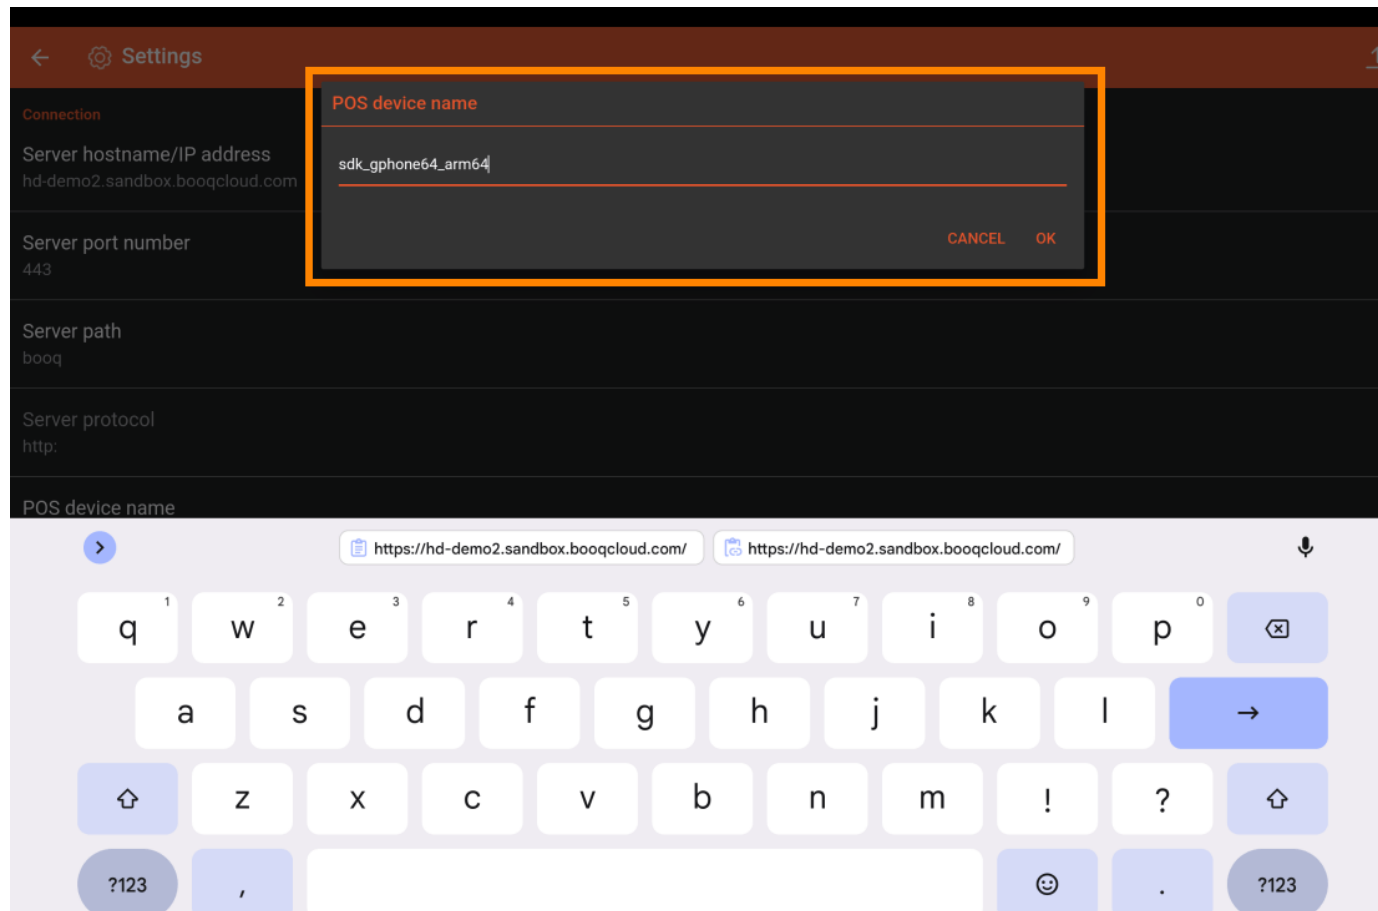

By tapping on **POS device name**, you will be able to change the current name of the device.

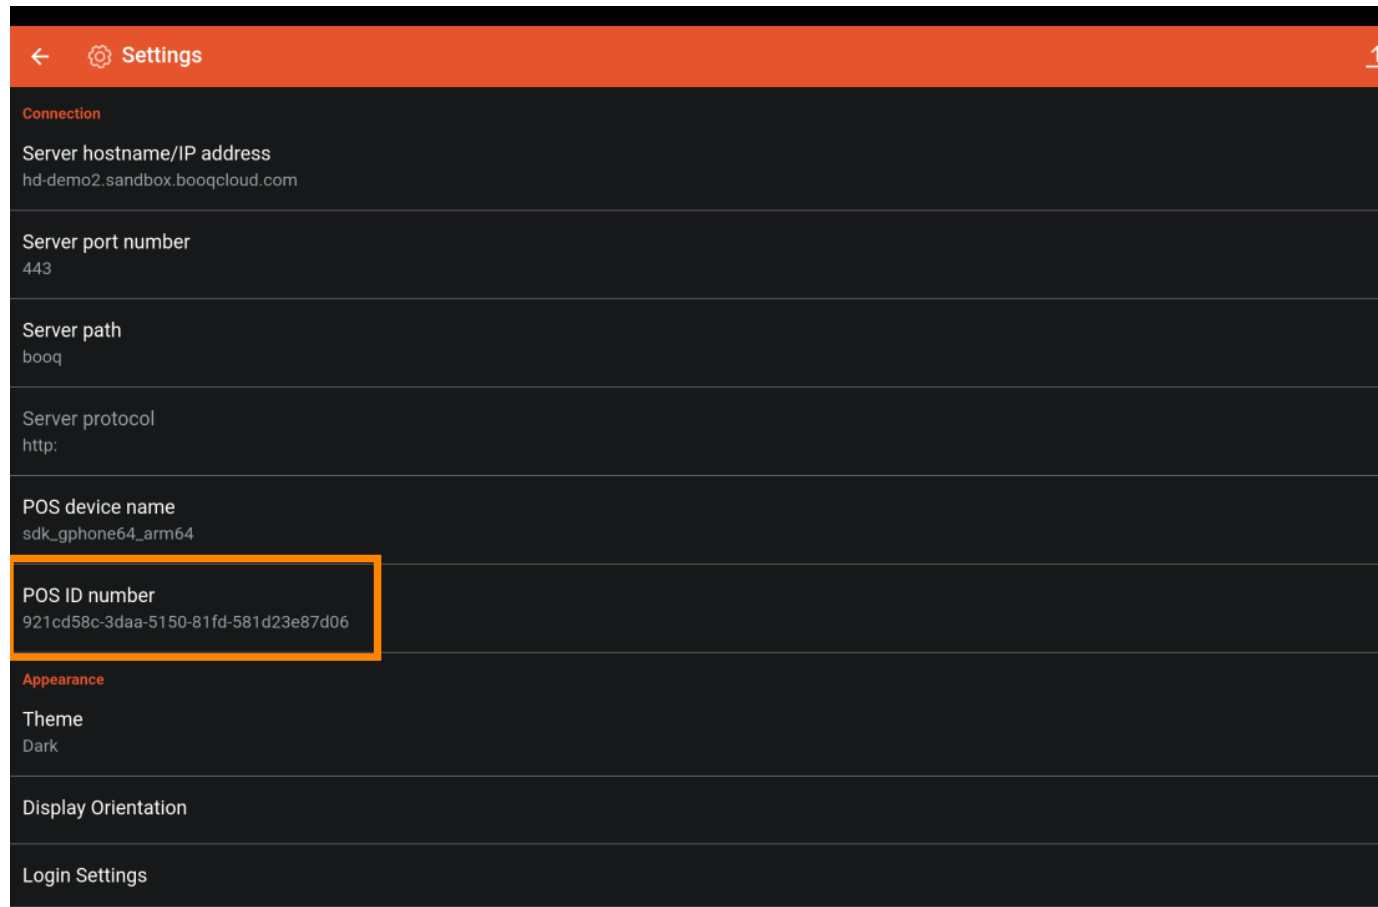

A pop-up will appear for changing the device's name. Now enter the new **name** and confirm the changes with **OK**.

 The unique ID of your device can be seen under **POS ID number**.

That's it. You completed the tutorial and now know how to adjust the connection settings of your device.
