

• Welcome to the DISH POS dashboard. In this tutorial, we show you how to set up permissions for users. First, click on General.

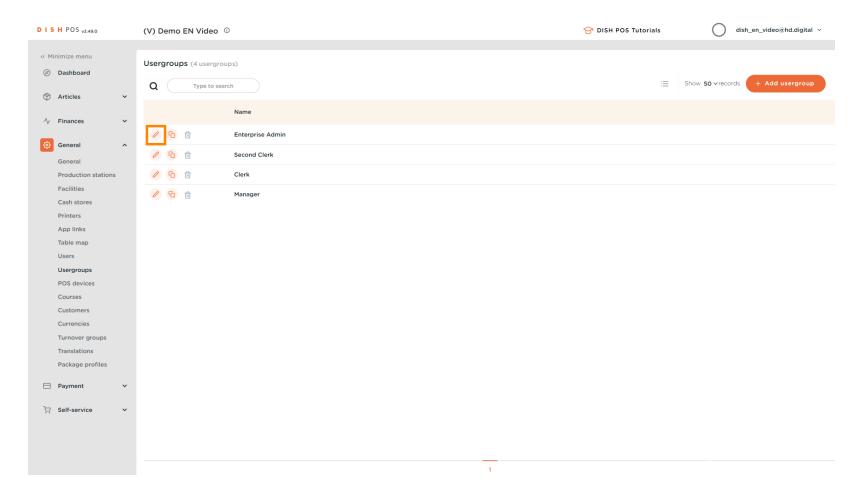

Then go to User groups.

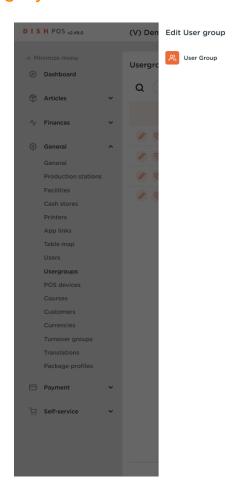

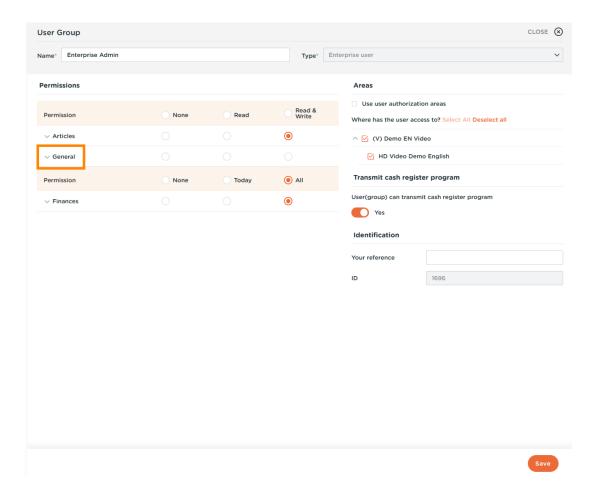

And click on the edit icon to change respective user group's settings.

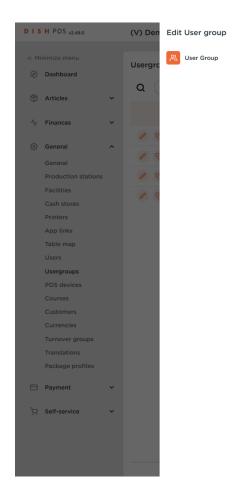

Once the chosen user group settings window opened, you can edit the permissions. Click on a function category to unfold the sub-functions.

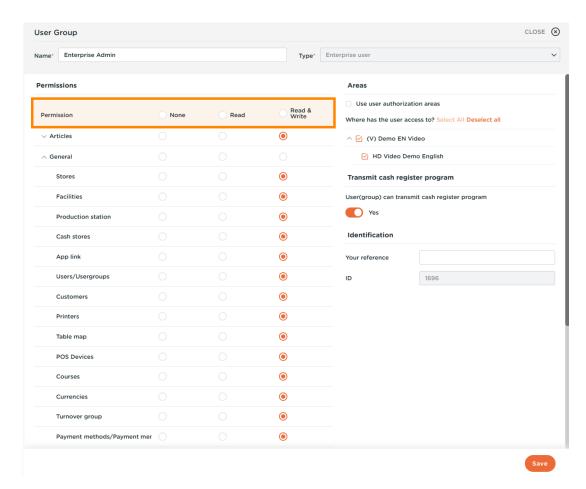

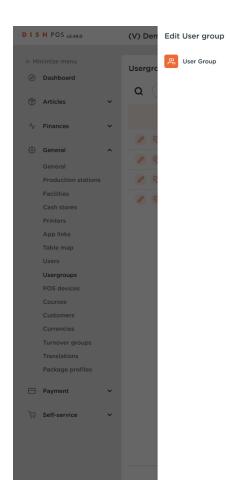

You have three options when setting permissions. The user either has none, only read or read and write permissions for the chosen function.

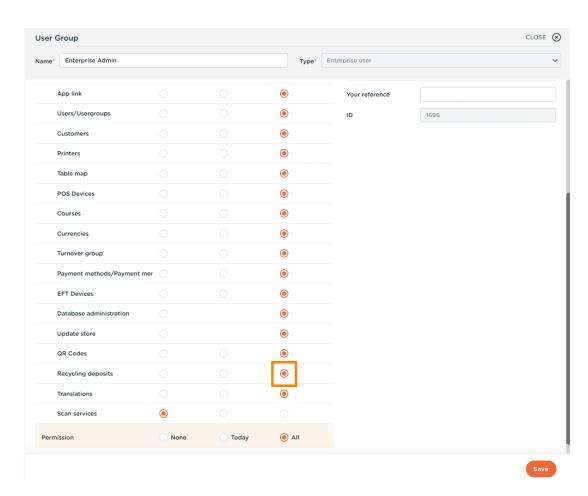

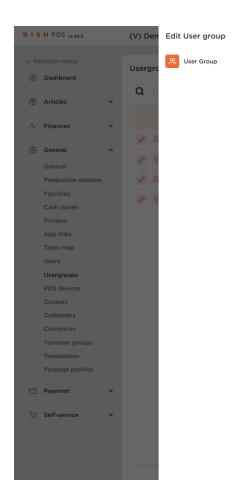

To set a certain permission, select the respective checkbox.

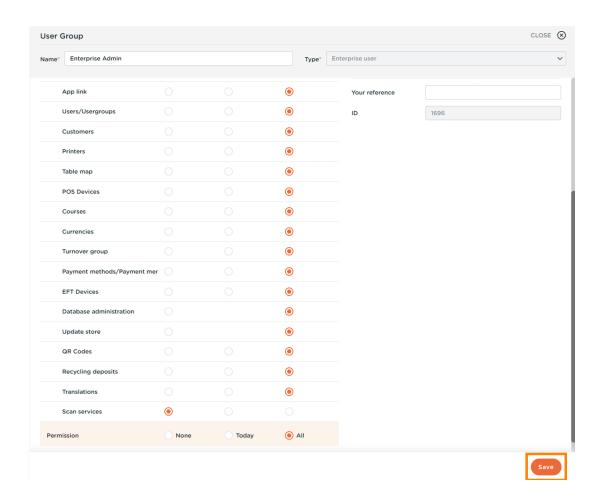

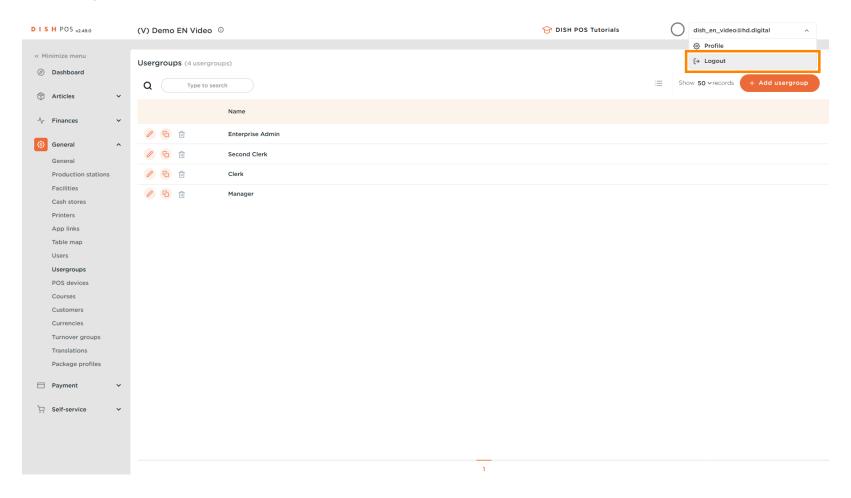

Then click on Save to apply the changes.

• For the changes to take effect, the users in the selected user group must log out and log in again. To do this, click on your profile and select Logout.

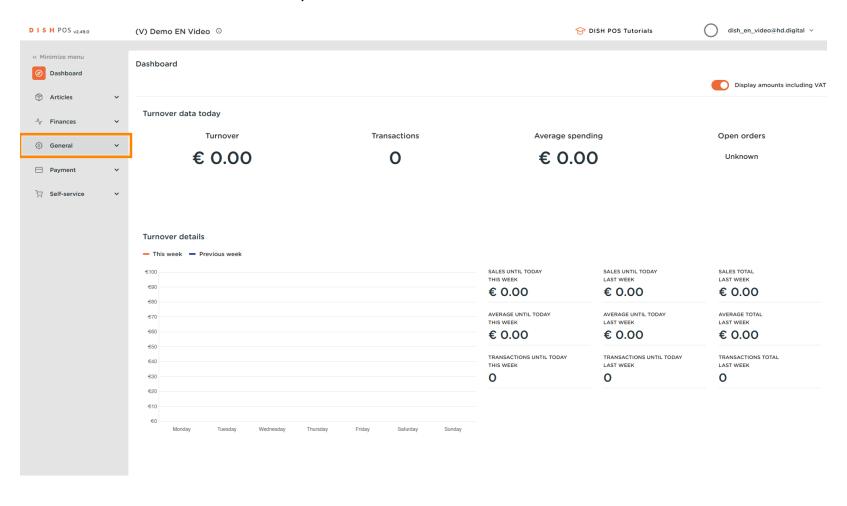

Back in the login area, enter your credentials and click on Log in.

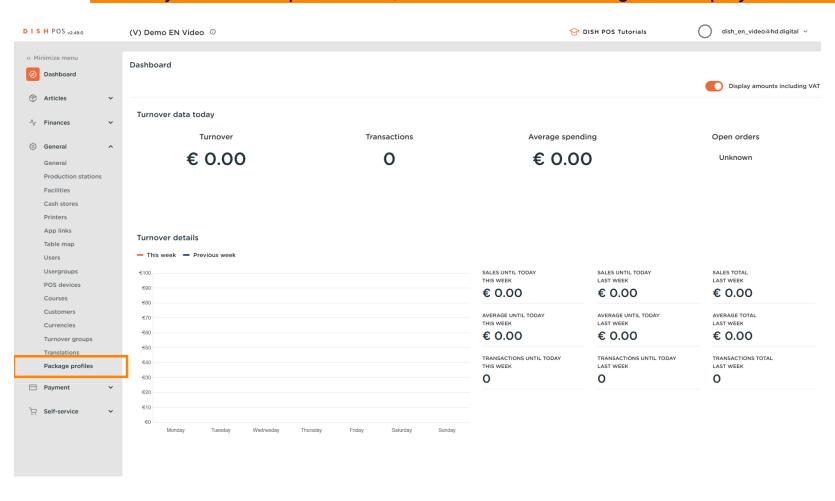

The changes are now effective. To check on it, go to the top-category of the function (in this example, the function is found under General).

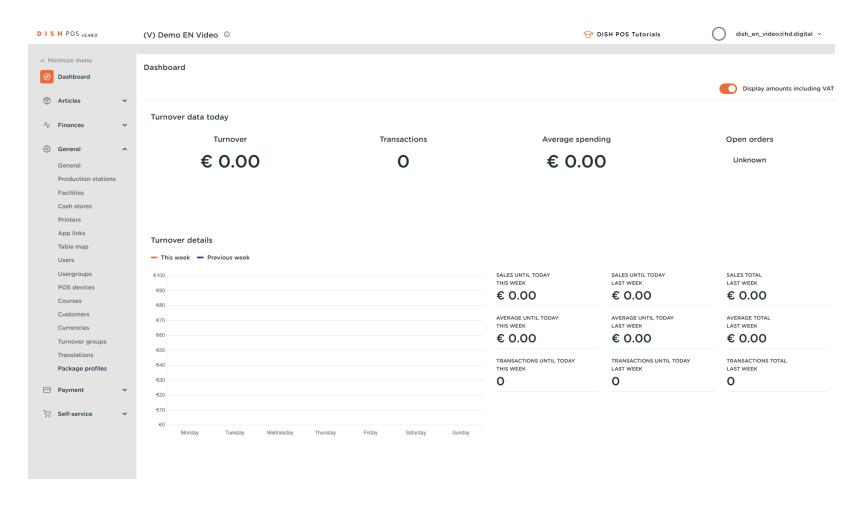

Since we have given permission for a function in this example, the user will now find the new function in the menu. Note: If you revoke a permission, the function will no longer be displayed in the menu.

That's it. You completed the tutorial and now know how to set up permissions for users.
